WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Hub: steel tube 70 mm OD, 80 mm long, bored 30 mm with an 8 mm keyway; M8 grub screw over the key.

Web: 6 mm plate disc 370 mm across, welded to the hub at its middle, square to the bore.

Rim: cut two sidewalls from a used car tyre, the bead ring trimmed off, 470 mm outside diameter.

Bolt them either side of the web rim with 12 M8 bolts on a 420 mm circle; the two inner faces lean together to form a V that grips the rope at a 400 mm circle.

Width over the rubber 90 mm; groove 4 mm wide at the root.

Check: spin it on the shaft; the V runs true within 3 mm; a 6 mm rope sits in it without bottoming.
